

Six Steps to Cassava Weed Management

Weed-free Fields, Bountiful Yields!

The “Six Steps Cassava Weed Management” technology is a holistic solution to weed problems in Sub-Saharan Africa’s cassava fields. It provides a decision-making framework for farmers to effectively control weeds, leading to higher cassava yields. This adaptable method caters to diverse farming conditions, enhancing cassava productivity and regional food security.

Problem

- **Weed Encroachment:** Cassava fields in Sub-Saharan Africa are frequently overrun by weeds due to inadequate and untimely control measures.
- **Slow Canopy Development:** The growth pattern of cassava makes it vulnerable to weed encroachment in the early weeks of cultivation.
- **Nutrient and Water Competition:** Abundant weeds consume significant nutrients and water, drastically reducing cassava yield.

Solution

- **Improved Yield:** It enables farmers to significantly increase cassava yields by managing weeds effectively.
- **Comprehensive Approach:** It provides a holistic strategy for weed control, including site selection, weed identification, and herbicide application.
- **Resource-Friendly:** The technology is accessible to small-scale farmers, requiring only simple and cost-effective equipment and herbicides.

Key points to design your business plan

For Farmers

The “Six Steps” toolkit, a free online resource, offers farmers, particularly cassava growers, guidance on weed management and planting.

However, it involves substantial costs, with weed removal and herbicide application costing US \$28-46 and US \$20-30 per hectare respectively.

Training on the toolkit and collaboration with local services and IITA can provide additional support.
